Summary:

Data Analysis and Automation specialist with 16+ years in multinational and financial environments, certified in Data Analysis by FundaTEC. Experienced in process improvement, automation, and end-to-end project delivery, hands-on experience on AWS CDK, with strong cross-functional collaboration. Proficient in Excel, Power BI, Python, Alteryx, and AWS analytics tools. Known for analytical rigor, attention to detail, and strong problem-solving skills.

Experience:

Amazon

Jan 2021-Present

Payroll OE (SSA) Manager

To lead and support automation initiatives across multiple regions, collaborating with diverse global stakeholders to identify opportunities, design solutions, and implement process efficiencies.

- I led the end-to-end automation cycle: gathering requirements, designing the automation workflow, and validating the solution with stakeholders. Using this approach, I delivered an automated Power BI dashboard for the EMEA region that eliminated over 500 hours of manual data processing and analysis annually.
- I optimized an Alteryx ETL workflow by rewriting nested SQL queries using CTEs, reducing the runtime from 4 hours to 30 minutes (an 87% improvement). This ETL pipeline also supported a Power BI dashboard that I maintained.
- By partnering closely with the Brazil Payroll team, I captured key process inputs and outputs to design a streamlined Alteryx workflow. This solution delivered an 83% reduction in processing time and significantly improved operational efficiency.
- Analyzing the Time and Attendance process with the India Payroll team, I identified critical reporting gaps and designed an automated Power BI solution to consolidate and streamline key workforce metrics for managers. This initiative reduced more than 8,000 manual hours annually, eliminated over 3,600 process defects, and increased the process sigma level from 4.3 to 4.8, significantly enhancing accuracy and operational efficiency.
- Working along with the US Payroll team, I designed a complex Power BI dashboard integrating multiple data sources to consolidate and visualize key performance metrics. This solution delivered more than 6,300 hours in annual time savings and established a single, reliable source of truth for workforce metrics and analysis.
- In partnership with the Germany Payroll team, I gathered detailed requirements and developed an Alteryx workflow to consolidate, analyze, and identify tax-exempt business expenses. The solution eliminated over 1,100 hours of manual work annually and generated \$424,000 in savings by enabling full utilization of eligible tax exemptions under local regulations.
- I earned a promotion from L4 to L5 for delivering high-impact automation and process-improvement projects. For the India Payroll team, I built a streamlined Power BI solution that eliminated 1,116 defects, reduced ticket queries by 49%, improved TAT by 54%, and raised the process sigma from 2.6 to 3.1. Additionally, I developed an Alteryx workflow for the Brazil Payroll team that reduced processing time by 75% and significantly improved efficiency.

**HP
Business Analyst****Jun 2006-Oct 2020
Jun 2018-Oct 2020**

Provider of business insights and actionable data based on data analytics. Provider of business insights and actionable data based on data analytics. Supporter of organization's Projects utilizing PMI methodology. Supported data governance, business analysis, dashboard development and RCA analysis.

- Implemented a root cause analysis model demonstrating creativity, analytical and continuous improvement skills. The volume of lines that required manual analysis were reduced by 30% due to a text mining formula on the data set. The analyzed metric improved 3% for Q3 FY20.
- Designed a Power BI-based tool using problem solving, analytical and collaborative skills. The tool was fed from a CRM live connection and included several calculated fields to achieve the stakeholder's requirements. As a result the users (field technicians) were capable of seeing the tickets they needed to work from their mobile phones and also were able to see nearby users with the intention of sharing their workload if necessary. Increase efficiency and reduced customers queries.

Continuous Improvement Lead**Dec 2017-May 2018**

Drove, engaged and managed process improvement opportunities within various teams including supply chain, customer service and field delivery services.

Area Business Manager**Aug 2015-Nov 2017**

Liaison between Customer Service, Supply Chain and Field Delivery teams. In charge of communicating metrics, coordinate joint efforts among various teams. Assistance with customer satisfaction escalations.
